

Losing teeth can be a big issue. It can limit any kind of eating to talking and smiling and even these are not easy to execute. But there's good news! Dental implants can help fix missing teeth and give you a beautiful smile again.

But where can you get the best dental implants?

Many people are going to Turkey to get dental implants done. Why? Because they can get great quality dental work for a lot less money than in many other countries.

Well, you don't have to look anymore, this article will inform you all about dental implants Turkey.

I'll explain what they are, why they're great, how much they cost, and what to expect when you go to Turkey for your new smile.

Let's get started!

What are Dental Implants?

A dental implant is actually a fake or artificial root of a tooth. Dentists use it to fill up the gap when you lose a tooth or have a gap between your teeth.

Basically, it is a screw placed into the jawbone. This screw holds a false tooth, called a crown. The crown looks like a real tooth. A small connector, an abutment, joins the crown to the implant.

Many people prefer implants over dentures, which are removable teeth. Implants offer benefits:

- Feel more like real teeth
- Work better than dentures
- Help you chew food easier
- Reduce the chance of cavities in nearby teeth
- Keep your jawbone strong
- Reduce the sensitivity of your teeth
- Don't need cleaning at night

However, not everybody can go for Dental Implants. This means the implant must fuse with the jawbone as a ready anchoring place for the planted teeth. Thus, they have to be healthy before agreeing to the surgery.

Type of Dental Implants

However, there are several types of dental implants. Let discuss them below:

1. Single Tooth Dental Implants
2. All on Four Dental Implants
3. All-on-6 Dental Implants
4. Cost of Full Mouth

Let's move on and checkout what these implant offer and how much they cost in turkey and other countries;

Single Tooth Dental Implants

Dental implants are a great way to fix a single missing tooth. One reason many people choose to get dental implants done in Turkey is because they cost less than in other countries.

For example, a single dental implant in Turkey can cost between **\$250** and **\$500**. But the same implant might cost \$1,000 to \$2,000 in places like the United States or the United Kingdom. This big difference in price is why Turkey is a good choice for people looking to save money on dental work.

All on Four Dental Implants

The All-on-Four dental implant is a type of treatment where four implants are placed into either the upper or lower jaw. These implants then support a full set of artificial teeth.

People like All-on-Four because it's a quick and easy way to replace all your teeth. It also takes less time to recover from compared to other methods.

Getting All-on-Four dental implants in Turkey is much cheaper than in places like the UK or

the US. The price usually ranges from **\$3,000 to \$7,000**.

All-on-6 Dental Implants

All-on-6 dental implants is a treatment that replaces all teeth in your upper or lower jaw. It uses six implants instead of four, like the all-on-4 method. This gives you a stronger, more stable set of replacement teeth.

All-on-6 is a good choice for people who have lost most or all of their teeth. It can also be helpful if your jawbone isn't very strong.

Getting All-on-6 dental implants in Turkey can cost between **\$5,000 and \$10,000**.

Full Mouth Dental Implants

If you need all your teeth replaced, full mouth dental implants might be the answer. Getting this done in Turkey can save you a lot of money compared to doing it in other countries.

In the United States, full mouth dental implants can cost as much as **\$60,000!**

But in Turkey, you can get the same treatment for around **\$10,000 to \$15,000**. That's a huge difference!

Many places in Turkey offer special packages that include your dental work, hotel stay, and even transportation. This can make the whole experience easier and affordable.

Remember: *While the cost of dental implants in Turkey is generally lower than in many Western countries, it's essential to remember that several factors can influence the final price. The brand of implant, the need for additional procedures like bone grafting, and the clinic's reputation all play a role.*

It's crucial to choose a reputable clinic that prioritizes patient safety and offers comprehensive aftercare. Compare prices from different providers and read patient reviews to make an informed decision. Remember, the cheapest option isn't always the best. Invest in quality care for long-lasting results.

Is It Safe to Have Dental Implants in Turkey?

I think you're not the only one who prioritizes safety when considering dental work in different countries. Whether you're thinking about veneers or implants.

Turkey has strict rules to protect patients and ensure quality care. Many Turkish dental offices have approval from important medical groups and keep their places very clean. Plus, Turkish dentists receive lots of training and know the newest dental tools and methods.

So, it's absolutely safe to have dental implants in Turkey. You can consider Antalya & Istanbul to get the best dental treatment. It's totally recommended from my side.

Why Should You Choose Dental Implants Turkey?

Dental implants are becoming popular in Turkey and people from other countries come here to get this done. This can be due to several reasons:

- First, dental implants do not cost as much compared to the prices of the same procedures in countries such as the United States, United Kingdom, and Australia. This enables a larger group of people to be able to afford quality dental care services.
- Second, the rules in Turkish dental clinics are preserved concerning patients safety and their health statuses. Thus, you can always be sure that your care will be in good hands.
- Third, majority of Turkey dentists have been trained in foreign lands. They must have been around for a long time because they are often found to have plenty of experience.
- Last but not the least, dental clinics in Turkey have used the most modern dental equipment. This ensures you get the best possible treatment.

What You can expect from Dental Implants Turkey?

Before you get Turkish teeth implants, you'll go through a careful checkup. Here's what happens:

- **Checking Your Health:** You'll share details about your overall health and past dental work. This helps the dentist plan your implant treatment.
- **Examining Your Mouth:** Your gums and jawbone will be checked by the dentist. These are vital for successful implants to be done on patients in need of dental amenities.
- **Taking Pictures:** You are likely to be referred to have x-rays and sometimes a 3D scan of the teeth. These images assist the dentists in implant planning to support the precise placement of the implants.
- **Creating a Treatment Plan:** Using the information from your checkup, the dentist will create a step-by-step plan for your implant treatment. This includes the steps, schedule, and cost.
- **Get Ready:** Make a list of medicines you take and any questions you have. This helps the dentist address all your concerns.

The Dental Implant Process

Step #1: Meeting the Specialist

You'll talk to a dentist who specializes in implants. They'll examine your mouth and discuss your options.

Step #2: Checking Your Teeth

The dentist will take X-rays or CT scans to see the condition of your jawbone and the position of your teeth.

Step #3: Planning Your Treatment

Your dentist will develop a treatment plan depending on the number of gaps to be filled and the kind of bone tissue remaining in the mouth.

Step #4: Treatment of Cavity Affected Teething Teeth

If you have a cracked tooth, it will be extracted to provide space for the implant by the dentist.

Step #5: Building Up Your Jawbone

Now, if the Jawbone is not strong enough, the dentist may include some more bone material for strengthening the Jawbone.

Step #6: Placing the Implant

The implant which is a tiny metal pin is placed where the tooth was in the bone.

Step #7: Waiting for Healing

Your jawbone has to heal around the implant which will take some time. This process is known as osseointegration and may take few weeks or months.

Step #8: Attaching the Abutment

After the healing process the dentist links a small piece known as the abutment from the Implant.

Step #9: Making Your Crown

To prepare a crown, the dentist makes an impression of your teeth.

Step #10: Completing Your Smile

The last stage is the placement of the crown on the abutment and you get a new tooth.

Last Words

Turkey is definitely the best place to get your teeth fixed! If you're thinking about getting **dental implants Turkey**, make sure you find the best dentist there. This will give you the best possible results.
